# Wait for confirmation signals

## VN30 performance

After 2 adjustment sessions, the VN30 Index recorded a growth session of 0.68%, rising to 2,080 points thanks to capital inflows into stocks such as BID, SSI, VCB, and VPB, which hit their ceiling prices. In addition, 18 other stocks grew by more than 1%. On the opposite side, selling pressure appeared mainly on VHM (-7.00%), VIC (-6.99%), and VRE (-6.86%).

## VN30 Future chart: Wait for confirmation signals

Despite the recovery session, the market still showed caution with the appearance of a small-bodied candlestick. Although volume increased, this does not yet represent a positive signal as no breakout session has occurred.

Additional signals still need observation to confirm the current trend, as some indicators continue to support an upward trend. Accordingly, the contract still closed above the 10, 20, and 50-period moving averages. Moreover, after a breakout session occurs, the appearance of a few adjustment sessions represents a normal phenomenon.

In the next session, the 2,100-point threshold will serve as strong resistance, while the 2,040-2,050 point zone will provide strong support.

## Technical strategy

The signals lack uniformity regarding the current trend. Therefore, traders need to exercise caution and wait for confirmation signals before opening new positions.
